

QWIKSOAKER

Foaming Gun

QT2710

QwikSoaker Delivers rich foam for faster, more effective cleaning.

The **QwikSoaker** Foaming Gun connects to a standard garden hose to create rich, clinging foam for faster and more effective HVAC coil cleaning. Its adjustable dilution dial allows precise cleaner-to-water mixing, while the ergonomic trigger and foaming nozzle provide consistent, easy application on coils, fan blades, and other HVAC components.

Designed for both professional technicians and maintenance personnel, the QwikSoaker helps improve cleaner coverage and contact time on dirty surfaces. Durable and easy to use, it's an ideal tool for routine HVAC cleaning and maintenance.

QT2782

QWIKBRIGHT®

Coil Cleaner & Protectant

QwikBright is a pH neutral cleaner/protectant. It's powerful enough for use on any heat exchanger coil, yet specifically formulated to cause no harm to microchannel coils. It will quickly penetrate and dissolve grease, dirt, grime, lint, dirt, dust, and bugs without removing any existing protective film, while adding it's own protective film. That's right, **QwikBright** contains a molecular metal protectant to further prevent corrosion without degrading thermal performance.

DIRECTIONS FOR USE

1. Always wear goggles, gloves, impervious protective clothing and a full face shield.
2. Make certain the unit is off and disconnected.
3. Using **QwikSoaker (QT2710)** adjust dial to desired dilution rate, as show in ①. Spray **QwikBright** onto the dirty coil and allow **QwikBright** to remain in contact with the dirty surfaces for 5 – 10 minutes.
4. Rinse the coil thoroughly with clean water until no cleaner is present on the coils.
